

I-Beam Key Level Stick

Now, a high quality, precision key level stick from Wessell, Nickel & Gross

For some years it has been difficult to purchase a quality key leveling stick. WNG has now answered that need while also improving upon this simple but important tool.

The "I-Beam" form is well established for its strength to weight properties. We use that form in our key leveling stick for light weight. Made from aircraft grade 6061-T6 aluminum for durability with a black anodized finish. Impervious to humidity changes. This tool will last a lifetime – or more.

One edge is straight and one edge is precision CNC machined to yield a 0.80mm (0.032") crown. We can guarantee the accuracy of this tool. One hole on each end is provided for hanging storage.

Part No. 06-5608
